

# Sample Screenshots

## Java SE/JavaFX and Scene Builder 2.0

Please find below sample screenshots of x3 applications built using Java SE/JavaFX and Scene Builder 2.0:

Application	Description
1. Bank Accounts Manager	In-depth assessment and chart analysis of personal banking history.
2. Sample Code	Source code repository.
3. Classic Games	Poker, space invaders, pong and missile command.

## Source Code

All source code can be found at:

<https://github.com/Paul-Surridge/Sample-Works/tree/main/Projects>

Built using:

Netbeans: 12.1  
Java: 1.8.0\_261  
JDK: 8u261 Windows x64  
JRE: SE Runtime Environment 1.8.0\_261-b12  
Scene Builder: 2.0

Netbeans was used given that it had free support for JavaDB, however for convenience all x3 projects already contain x2 configuration folders 'nbproject' and '.idea' therefore either Netbeans or IntelliJ IDE can be used to review and immediately run..

# 1. Bank Accounts Manager

In-depth assessment and chart analysis of personal banking history

- A simple and intuitive way to review your own personal spend and save history:
  - History: Categorize incoming/outgoing transactions in order to gain valuable insights into your spend and save habits.
  - Charts: View account(s) history in comprehensive and easy to use bar, pie and line charts
  - Compare: Layer multiple accounts, categories or entries to contrast and compare.
  - Integrity: Run checks to ensure that there are no missing payments or potentially suspicious activity.
  - Watch: Watch certain categories for any unexpected increases or changes.
  - Refunds: Monitor incoming refunds ensuring that they are received and of correct amount.
  - DD/SO: Comprehensive review of your monthly direct debits and standing orders.
- All transaction history is uploaded and stored into local embedded JavaDB.
- All implemented through a simple, ergonomic, efficient and highly versatile dashboard.

The screenshot shows a software application titled "Bank Accounts Manager" with a sidebar and several windows open.

- Left Sidebar:** Shows account details for Barclays Current (Bal Start: 20,198.43, Bal End: 114,179.56), Barclays Saving (Bal Start: 77,114.30, Bal End: 61,201.26), and Barclays ISA (Bal Start: 1,267.38, Bal End: 1,267.38). It also lists "All Accounts" (98,580.11) and "Total Incoming" (985).
- Middle Window:** A chart titled "Barclays Current - Purchases - Per Month" showing transaction volume by month.
- Bottom Window:** A "History" table showing transaction history from 05 Jan 21 to 21 Sep 21.
- Center Dialog:** A modal window titled "SSE - Electricity Rebate" for creating a refund reminder. It includes fields for "Name/Merchant" (SSE - Electricity Rebate), "Keywords" (sse rebate elec), "Amount" (£ 25.00), and "Created" (01/06/2022). An "Edit" button is at the bottom right.

Create a refund reminder to continually lookout for incoming entries with matching keywords to ensure that the refund is received from merchant

The screenshot shows a software application titled "Bank Accounts Manager" with a dark-themed interface. The main window displays financial data for three accounts: Barclays Current, Barclays Saving, and Barclays ISA. The "Barclays Current" account is selected, showing a balance start of 20,198.43, and a balance end of 114,179.56. A chart titled "Barclays Current - Purchases - Per Month" is visible below the account details.

A central search bar labeled "Barclays Current - Purchases - Per Month" is present. Below it, a table lists a single potential refund entry: "01 Jun 22 SSE - Electricity Rebate sse rebate elec 25.00 1 potential refund since date".

An overlaid modal dialog box is centered over the table, titled "Confirm Refund". It contains the text "Refunds" and a blue arrow pointing from the "Type" column of the table above to the "Type" field in the dialog. The dialog has a "Close" button at the bottom right.

To the right of the main window, a "History" panel displays a list of transactions. The first few entries are:

## 2. Sample Code

### Source Code and Research Repository

- One of the most critical and useful tools for a programmer is the ability to have quick, efficient and accurate reference material, including:
  - Research: Summaries of a previously researched subjects, topics or concepts.
  - Sample Code: Working examples of source code previously and successfully implemented in the past.
  - Syntax: Quick reminder of a particular construct's syntax.
  - Rules: Summary of the rules, advantages, disadvantages and pitfalls surrounding a particular class, interface or component.
- This simple application aims to provide:
  - Quick and efficient store, edit and retrieval of content via a tree structure backed by embedded JavaDB.
  - Simple and effective.
  - Easy and intuitive.
  - Save time and increase productivity.

## Library and Viewer

Library built by user where each node contains and displays text, notes or code saved in JavaDB

Edit and save any aspect of the node including name, content, icon or position in tree

## Search and Breadcrumb Trail

The screenshot shows a Java documentation interface with the following elements:

- Left Sidebar:** Titled "Sample Code". It has tabs for "Name" and "Code". Under "Code", there is a "Search Results" section and a tree view of Java components:
  - Java** (selected): Contains "Top Level Components" (Class, Interface, Enum), "Generics" (Generic Class, Generic Interface, Type Parameters, Type Arguments), "Collections" (Collections Framework, Class, Collection Implementations, Lists, Maps, Sets), and "Interface" (Collection, Comparable - Comparator, Deque, List, ListIterators, Map, Queue, Set).
  - Generics**: Contains "Type Arguments" (selected).
- Top Bar:** Includes tabs for "Code/Notes", "ASCII Table", "Escape Sequences", and "Instructions / Shortcut Keys".
- Central Content Area:** Titled "Type Arguments". It has tabs for "Java", "Generics", and "Type Arguments" (selected). The content includes:
  - Parameters:**
    - 1. Variability:
      - In accordance with the Compatibility purpose listed above,
      - Method
    - void method(ClassA<?> objClassA)
    - void method(ClassA<? extends Number> objClassA)
    - In accordance wth the Type Specifications listed below.

Annotations with arrows point to specific features:

- An arrow points from the "Type Arguments" tab in the sidebar to the "Type Arguments" tab in the central content area.
- An arrow points from the "Type Arguments" node in the sidebar tree to the "Type Arguments" tab in the central content area.
- An arrow points from the "Type Arguments" tab in the central content area to the "Type Arguments" section in the main text.
- A callout bubble points to the "Compatibility purpose listed above" text in the "Variability" section.
- A callout bubble points to the "Method" section in the "Variability" section.
- A callout bubble points to the "Type Specifications listed below" text in the "Variability" section.

Text annotations at the bottom:

- "Search for text using | to combine words"
- "Matching words are highlighted, use cursor up/down to jump between locations"
- "Click on breadcrumb trail to automatically jump to node"

## Text Viewer

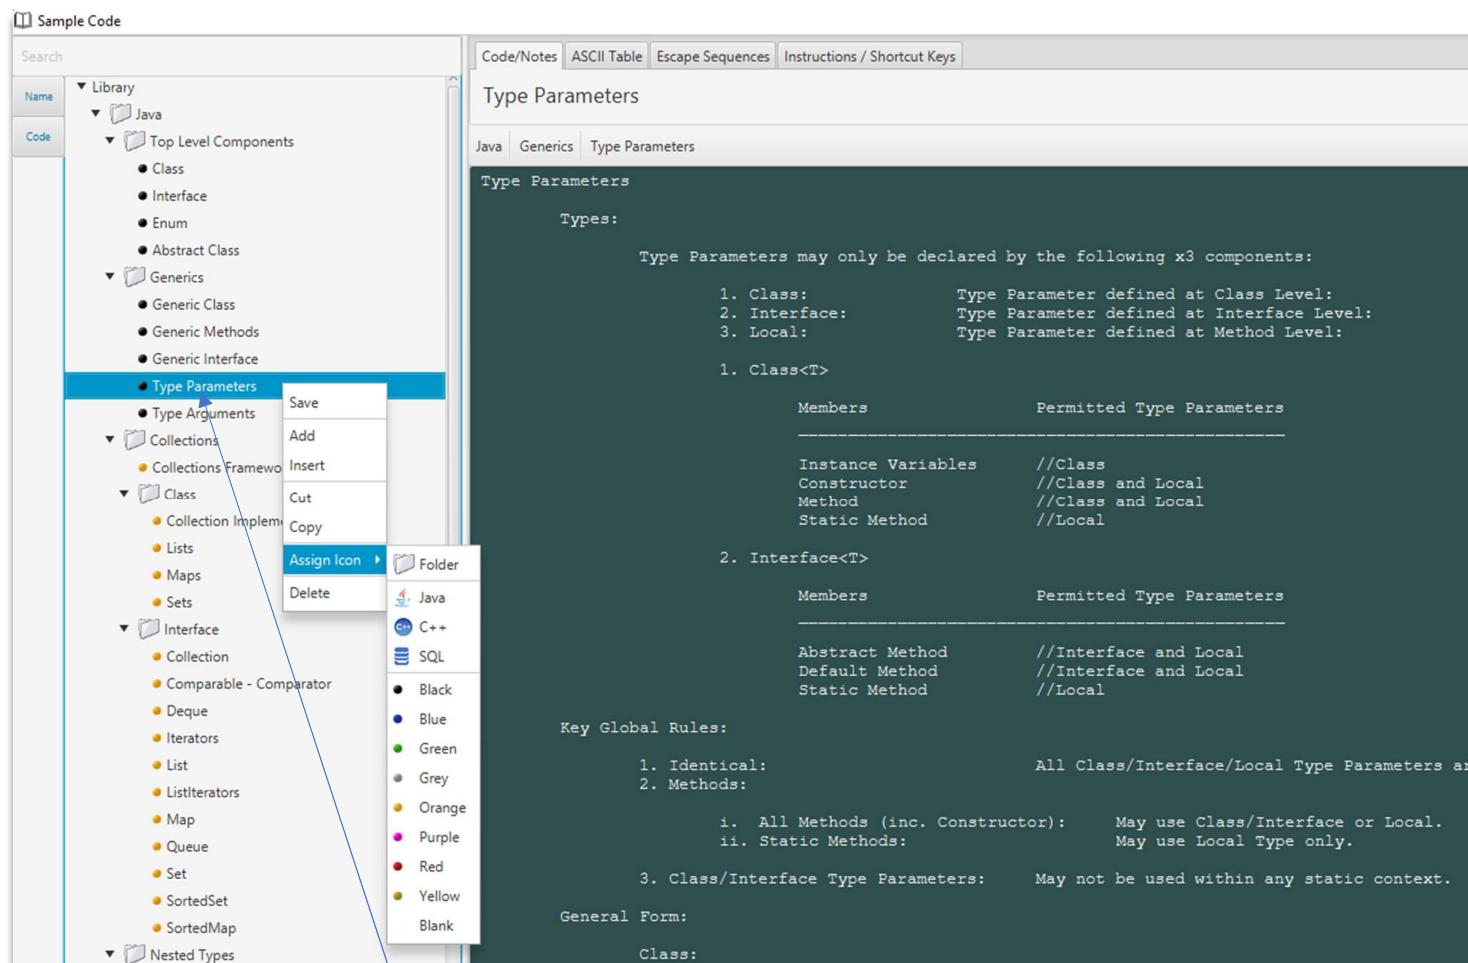

The screenshot shows the 'Sample Code' application interface. On the left, there's a sidebar with a 'Search' bar and two tabs: 'Name' (selected) and 'Code'. Below these are several categories: 'Queue', 'Set', 'SortedSet', 'SortedMap', 'Nested Types' (with sub-options like Overview, Nested Classes, Local Class, Anonymous Class, Lambda Expression, Method References, Naming Convention), 'Essential/Common Classes' (with sub-option Arrays), 'Code Samples' (with sub-options like Reading in a File, Event Listener, Event Handler - Keyboard, Event Handler - Button, Setting Tooltips). The 'Event Handler - Keyboard' code sample is selected in the sidebar. The main panel displays the Java code for an event handler:

```
private void initKeyEventHandlersFullScreen()
{
    final EventHandler<KeyEvent> ehKeyPressed_apFullScreen = (KeyEvent ke) -> {
        if(ke.isControlDown())
        {
            switch(ke.getCode())
            {
                case F:           setFullScreen(false, false);      break;
            }
        }
        else
        {
            switch(ke.getCode())
            {
                case ESCAPE:    setFullScreen(false, false);      break;
            }
        }
    };
    apFullScreen.addEventHandler(KeyEvent.KEY_PRESSED, ehKeyPressed_apFullScreen);
}
```

A blue arrow points from the text below to the opening brace of the innermost block in the code.

Quickly edit text where any changes are automatically saved to the embedded JavaDB

## Node Context Menu

Right click to add/remove nodes in library or alternatively use shortcut keys

## Instructions/Shortcut Keys

The screenshot shows the 'Sample Code' application window. The left sidebar contains a tree view of a library structure under 'Name' and 'Code' tabs. The 'Code' tab is selected, showing categories like Library, Java, Top Level Components, Generics, Collections, Class, Interface, and Nested Types. The 'Instructions / Shortcut Keys' tab is selected in the top navigation bar.

**Overview:**

- Sample Code is intended to be a simple, quick and efficient means of storing, searching and retrieving research notes or useful pieces of working sample code.
- Build up the library by adding nodes.
- Library is stored in a simple Derby/JavaDB database.

**Controls:**

- All controls are contained within x2 locations:
  1. Right click on node to open context menu.
  2. Shortcut Keys.

**Commands:**

**Library Parent Node:**

Context Menu	Shortcut	Action
Add	Ctrl + A	Add new node to branch
Add Copied	Ctrl + V	Add copied node to branch
Save	Ctrl + S	Save the current nodes name and code/notes to database
Assign Icon		Assign icon to either: Node only Local branch (All parent or leaf nodes) All branches (All parent or leaf nodes)
Expand:		Expand either the node only or include all decendent parent nodes
Collapse:		Collapse either the node only or include all decendent parent nodes
Delete	Del	Delete node (and all descendants) from library and database
	Ctrl + Up	Move node up
	Ctrl + Down	Move node down

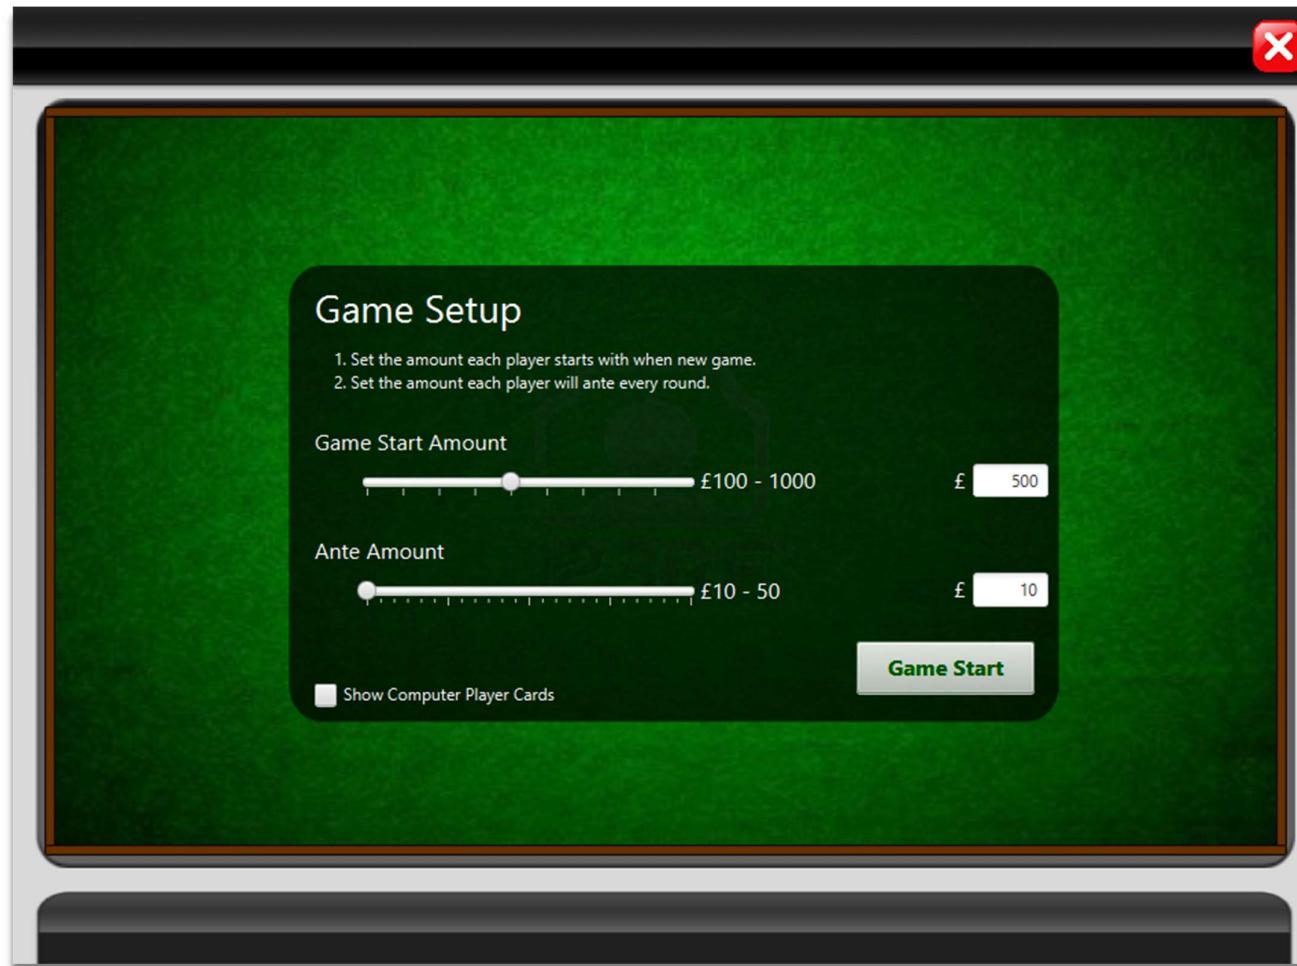

**Library Leaf Node:**

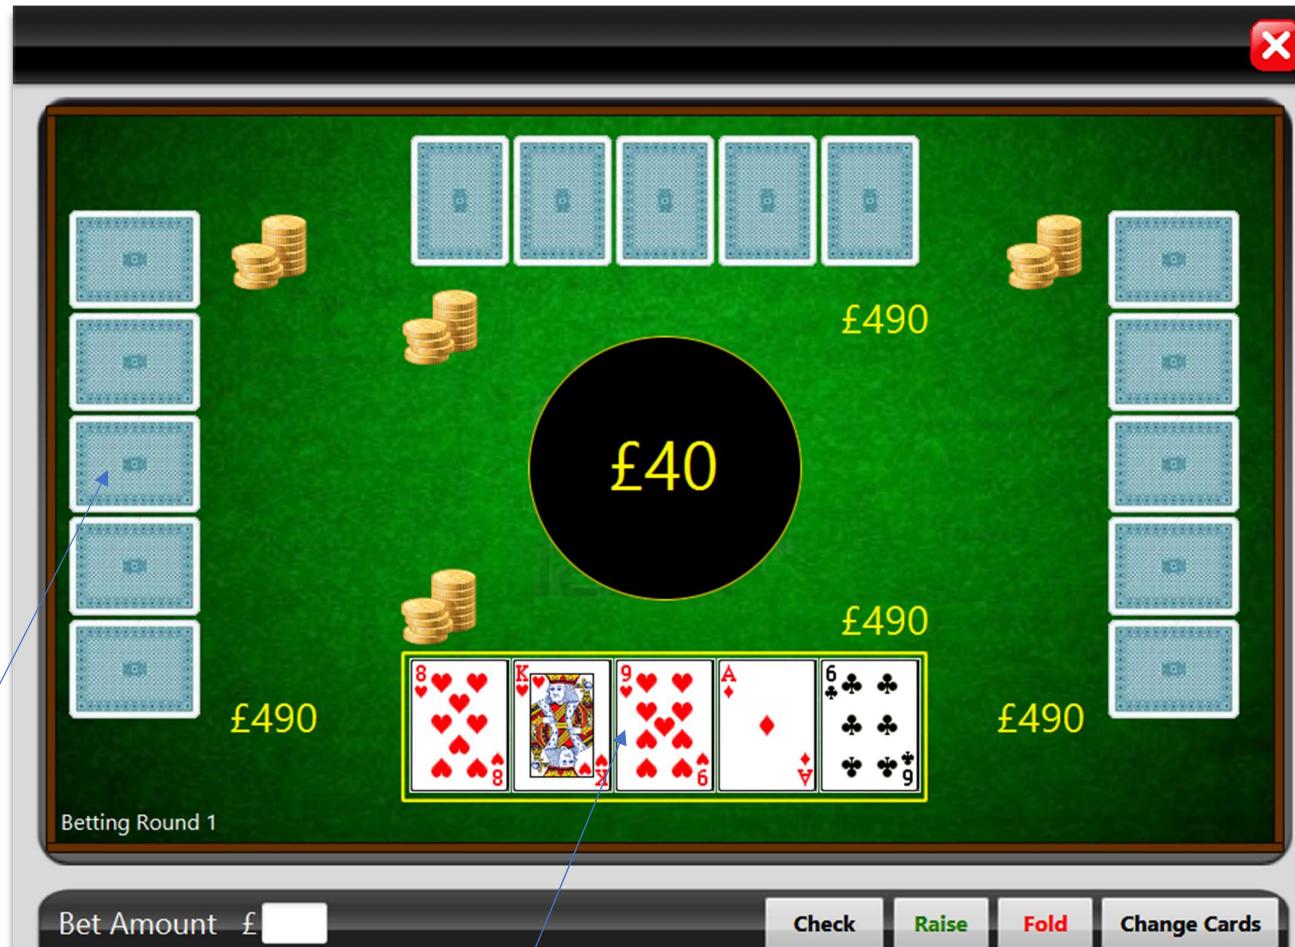

Context Menu	Shortcut	Action
Add	Ctrl + A	Convert node to parent and add new node
Insert	Ctrl + I	Insert new node to branch
Add Copied	Ctrl + V	Convert node to parent and add copied node
Insert Copied	Ctrl + I	Insert copied node to branch
Save	Ctrl + S	Save the current nodes name and code/notes to database
Assign Icon		Assign icon node
Delete	Del	Delete node from library and database

'Instructions/Shortcut Keys' tab contains full listing of available functionality and shortcut keys

### 3. Classic Games - Poker

x5 Card Draw - x1 Human and x3 Computer Players

Play against x3 other computer players

The cards are dealt and betting round 1 begins

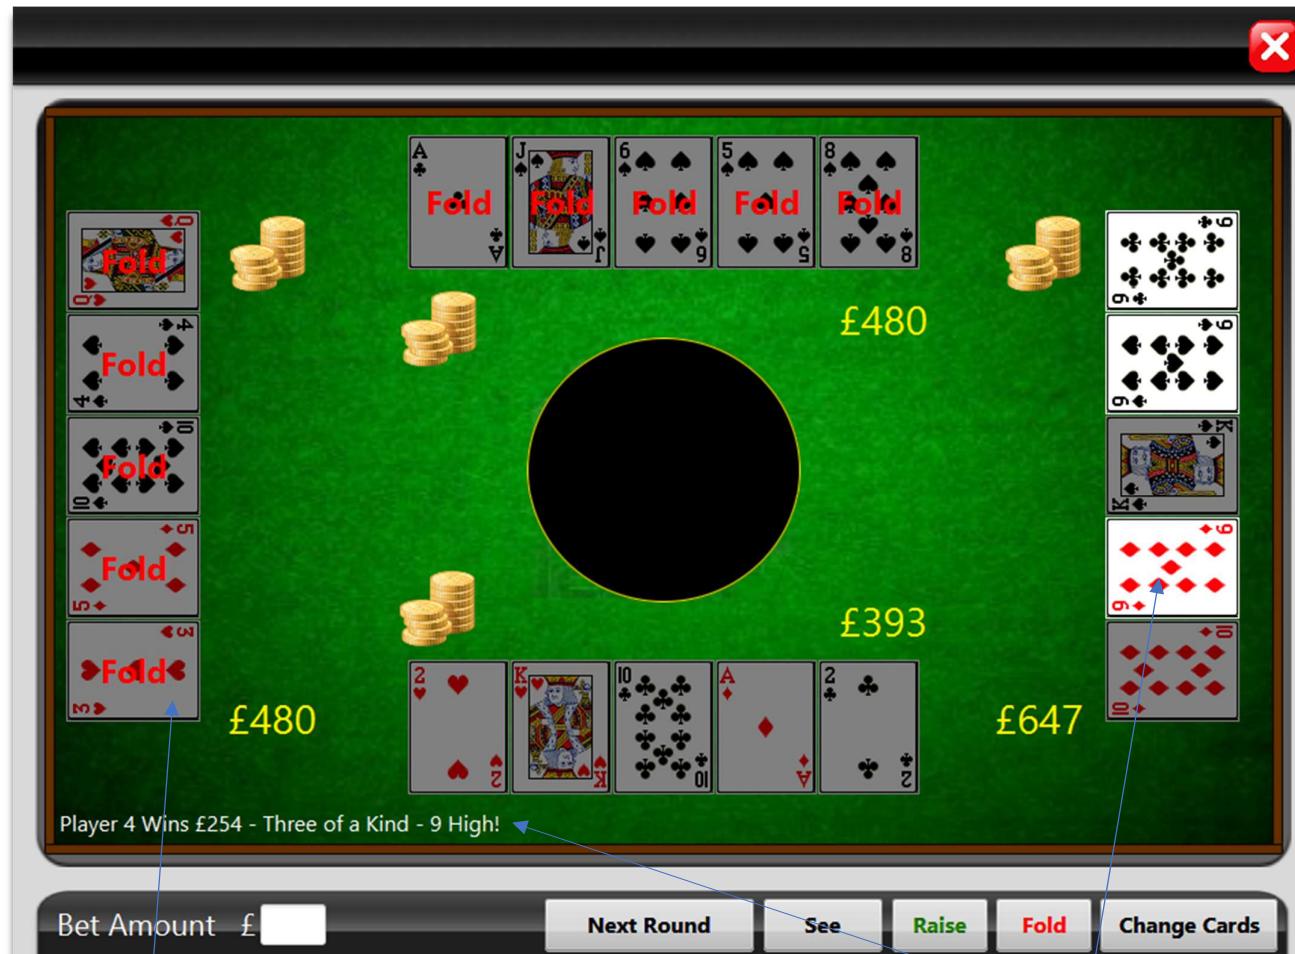

Standard x5 card draw rules

Click on cards to toggle between holding/changing cards

Computer players decide on how much to bet based on a number of factors including their cards, their pot and the amount others players have already bet, to observe the computer players decision making in real time select 'Show Computer Player Cards' on game setup page.

Once game complete all remaining players show cards

The highest hand wins and collects pot

## Space Invaders

Protect x5 cities from alien ships.

Move ship:  
Fire weapon:

[cursor left/right]:  
[space]

Select missiles:  
Select high powered missiles:  
Select nukes:

[m]  
[h]  
[n]

Collect power-ups

Alien ships increase in speed and missile frequency with each level

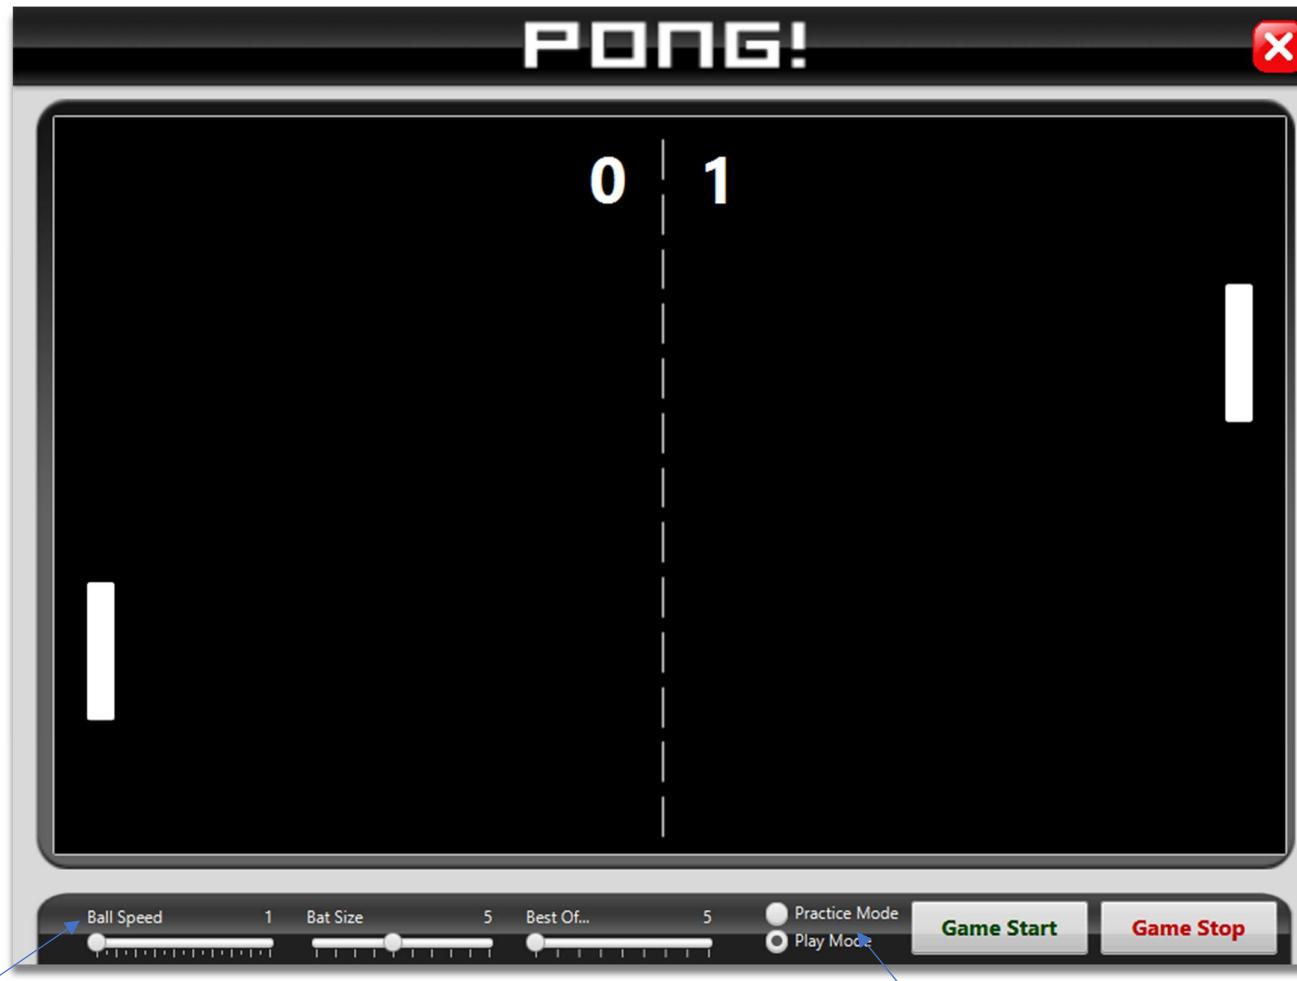

Prevent alien ships from destroying cities

Gain points by destroying alien ships and the number of remaining cities after each round

# Pong

Bat and Ball Game

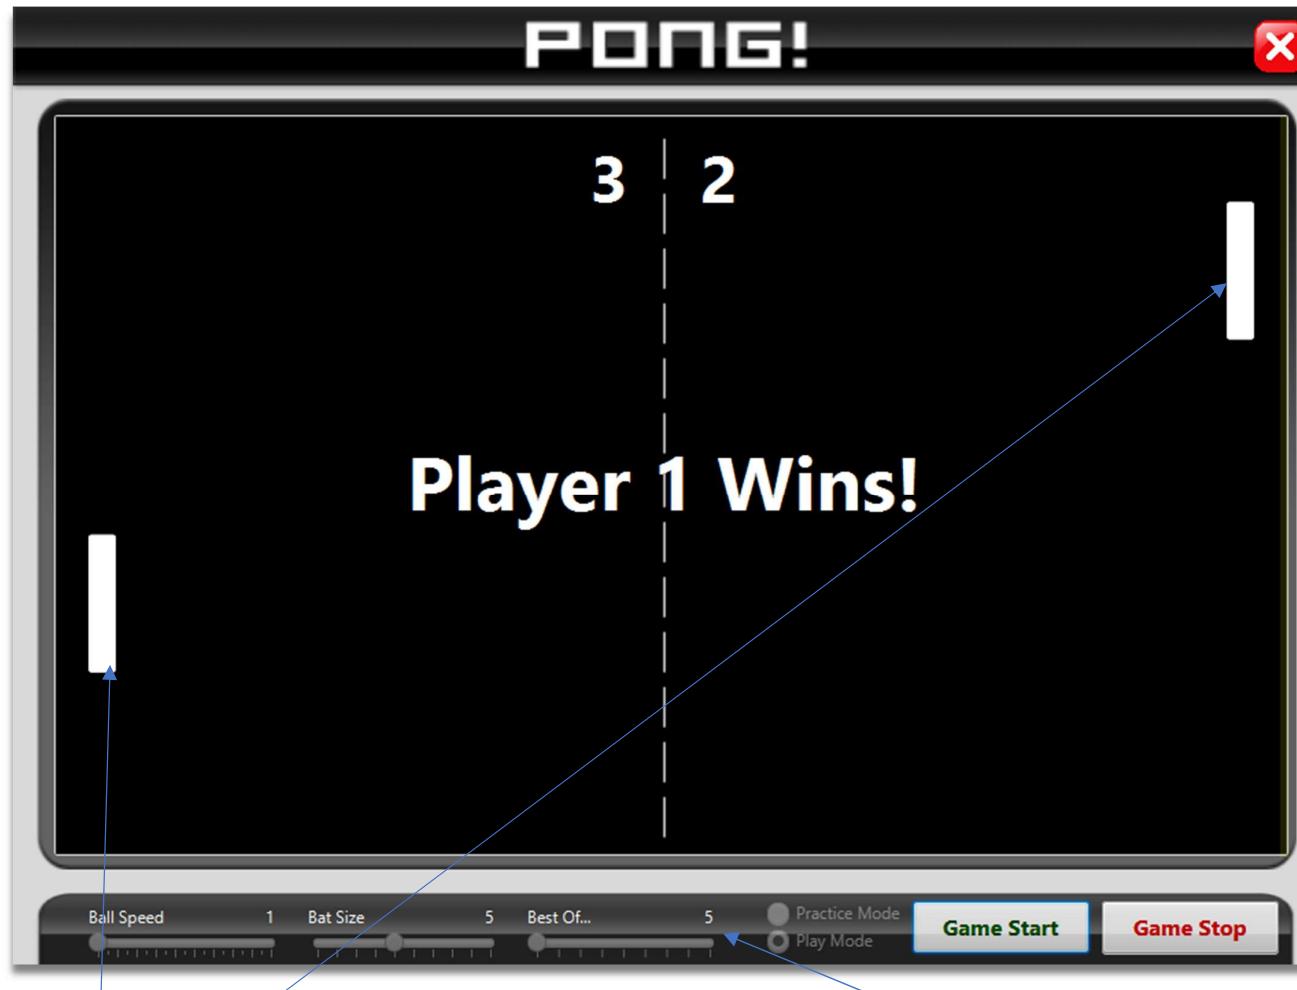

Set game parameters

Practice Mode:  
Play Mode:

Ball rebounds off all 4 boundaries  
Ball touches end boundaries, other player wins a point

Move Bat Up:  
Move Bat Down:

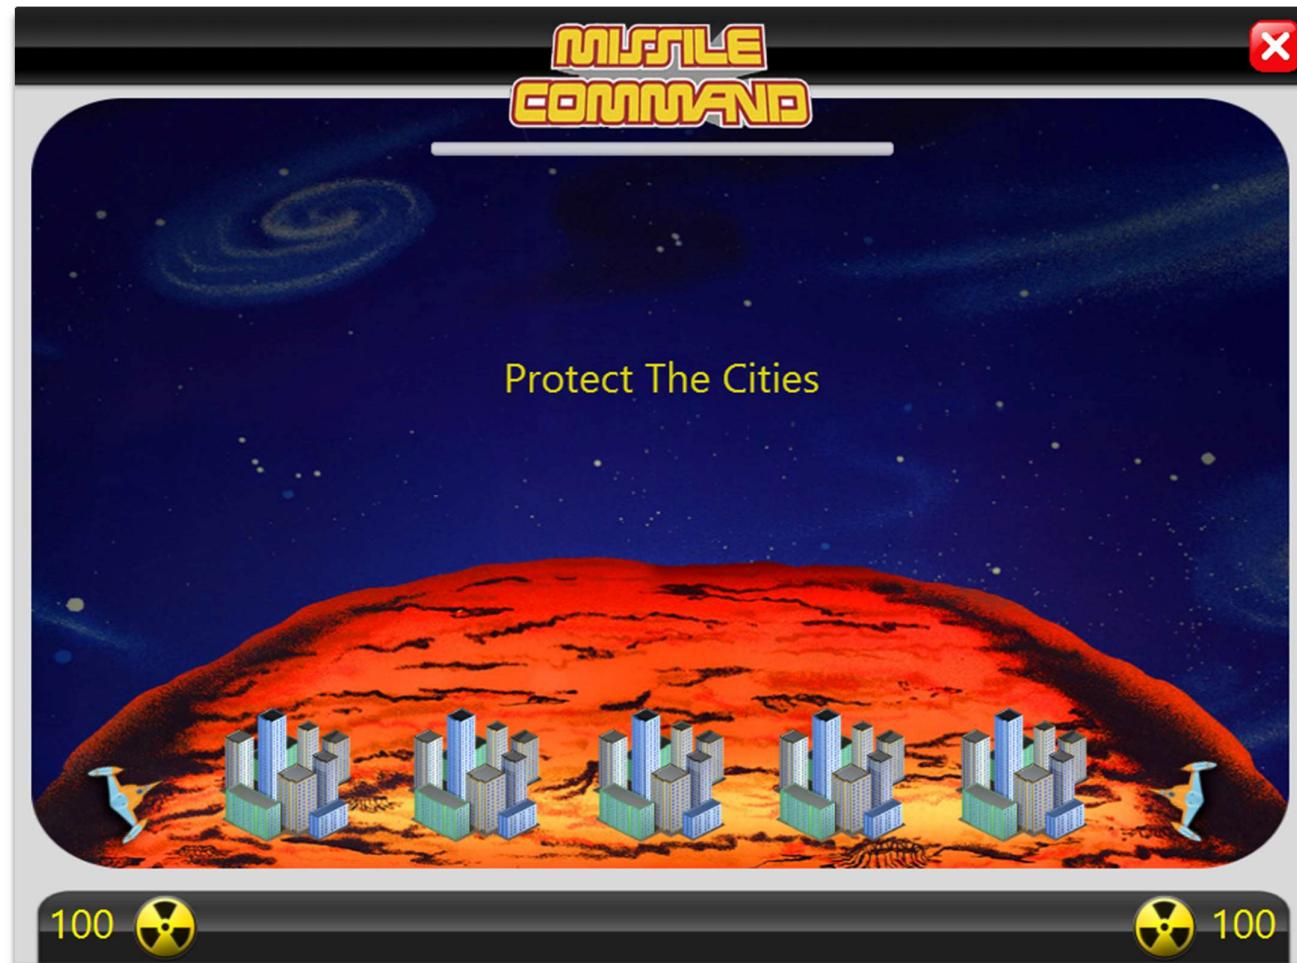

Player 1  
[a]  
[z]

Player 2  
[k]  
[m]

Player wins game if score reaches winning amount

## Missile Command

Protect x5 cities from incoming alien missiles

Protect cities from incoming alien missiles

Use the mouse to launch counter missiles to explode near and consume incoming missiles

Progress bar indicates length of time for each level

At the end of each round the remaining number of ships, ammunition and cities are converted into points
